Assembly Instructions:

1) Remove all components from the package and confirm that you have all of the parts listed.

FRAME ASSEMBLY:

2) Assemble the frame according to the diagram below.

NET ASSEMBLY:

3) The larger netting (Part 9) attaches to the curved side of the frame. The smaller netting (Part 10) attaches to the flat side of the frame.

4) For the curved side of the frame, slide the corners of the netting (Part 9) onto the corners of the frame. Attach the bungee cords (Part 11) to the grommets on the netting (Part 9) and then to the frame to secure. The net should be very tight. Two people may be required to attach to the frame.

5) For the rebound side of the frame, attach the bungee cords (Part 11) to the grommets on the netting (Part 10) and then to the frame.

6) Use the ground stakes to secure and stabilize the item during play. Place the ground stakes on each of the four bottom corners of the frame. *Note: The ground stakes should attach to the frame only. Make sure that the netting is not caught in the ground stake.

Press the tube towards net as shown in Image & pull the net sleeve down with other hand.

FUNCTION:

The Pro Ramp has two sides designed for training.

Side 1: Curved Ramp

This side is designed to help train passing, trapping and heading by returning the ball in a controlled "looping" manner.

In order to achieve the looping effect, kick the ball toward the center of the trainer. The ball MUST remain on the ground and kicked with force. The curved design and the tension in the netting allow the ball to loop back to the player.

Side 2: Rebound Wall

This is designed to be used with one or multiple players. Kick the ball into the wall to practice "Give and go" training, one touch passing and trapping skills.

STORAGE:

To fold the unit for storage and travel, slide down the plastic guard on the locking hinges located on both sides of the frame. Unclip the latch to release and fold. See images below.

Note: Netting was removed to illustrate folding feature. The netting can remain on the product when folding for storage.
